1 DATA STANDARD

1.1 Introduction

1.1.1 Application

This standard can be used to exchange data describing the deliverables produced as a result of delivery of a **Geographical Unit** where:

The GEOGRAPHICAL UNIT is a geographical sub-division of land for administrative purposes such as “Church of England Diocese”, “Roman Catholic Parish”, “County”, “Output Area”, “School Place Planning Area”, etc.

1.1.2 Compatibility with non-ISB standards

There are no known compatibility issues related to this standard.

1.2 Terminology and notation

The following sections contain:

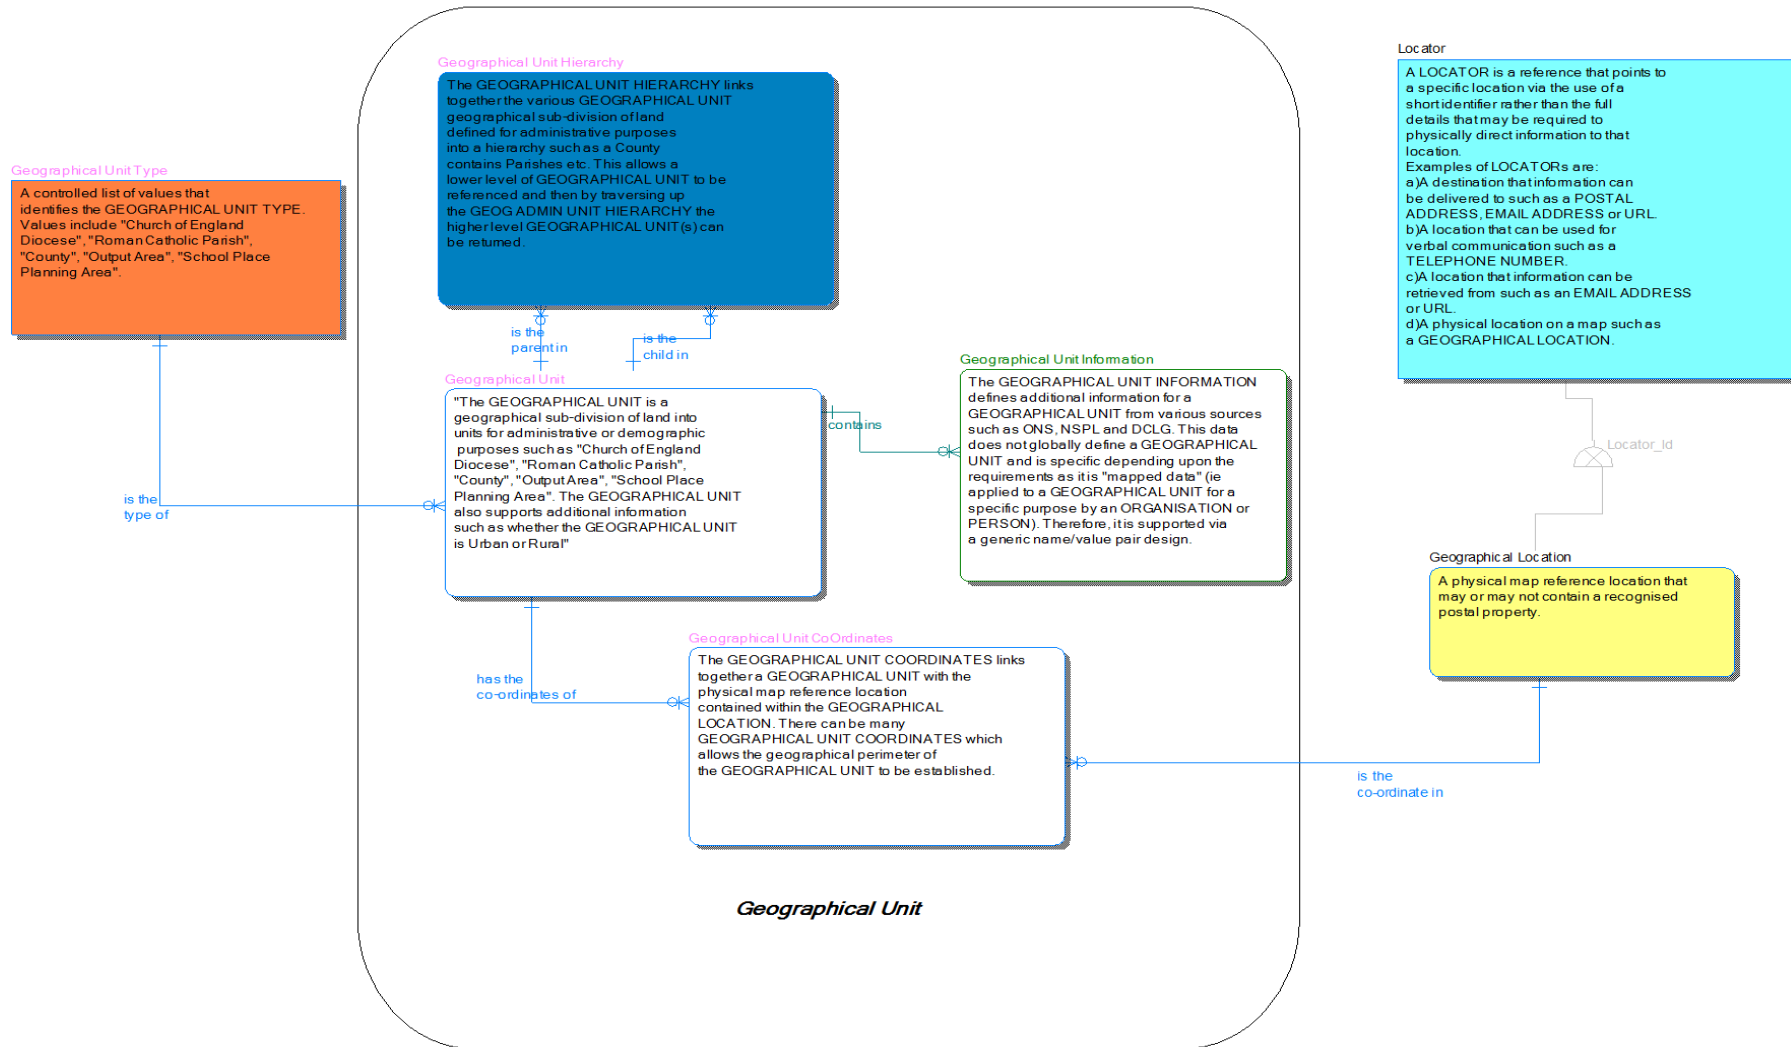

- **Entity Definition Model** – A high level diagram showing: entities; their descriptions and relationships
- **Attribute Model** – A lower level diagram showing the names of attributes making up entities. Attributes in the top section of an entities box are those making up its primary key
- **Data Definitions** – Detailed descriptions of each of the entities at an attribute level, showing attribute: name; definition; whether it is part of a key; whether it is mandatory; its data type and format; parent information and Controlled List association

Only those entities within the boundary square in the diagrams are part of this particular data standard, entities outside the boundary are shown for context purposes only (and can be found within other Business Data Standards), or separate Controlled List reference data.

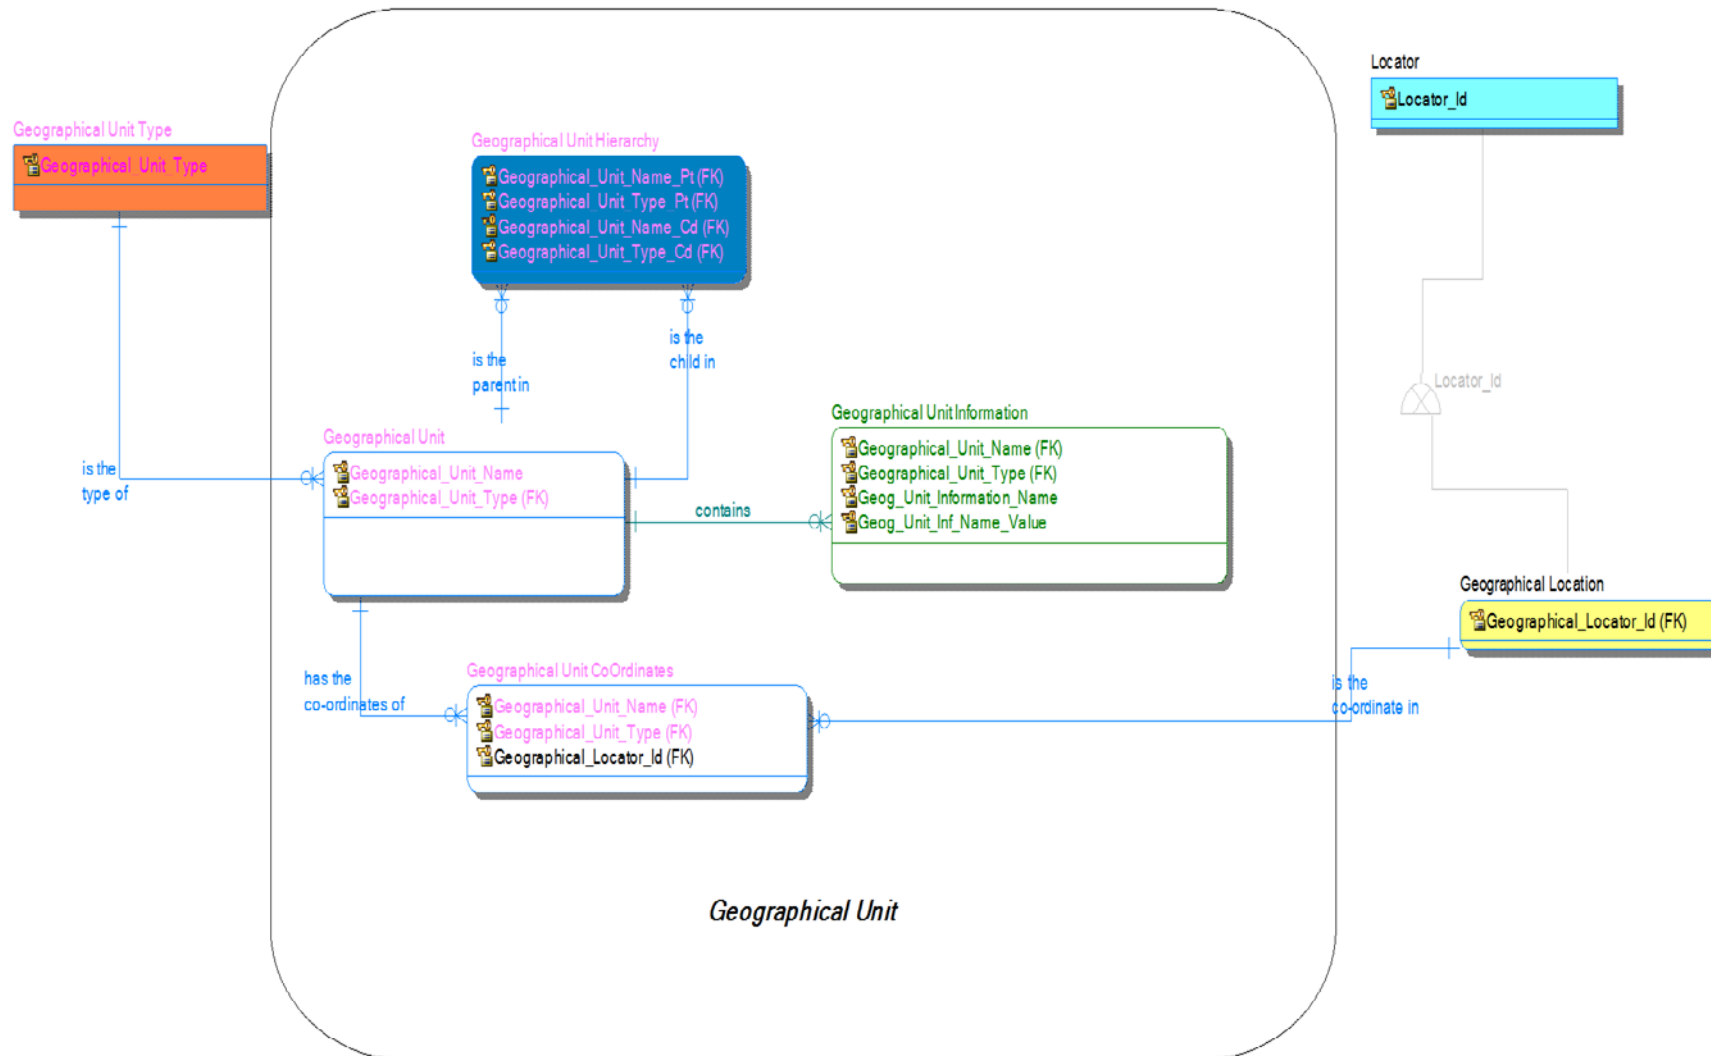

The standards for naming, notation and conventions used for this development can be found in the BDA Data Architecture Modelling Standards document. For convenience, a quick reference of the colours used in these diagrams is shown below.

1.3 Entity Definition Model

1.4 Attribute Model

1.5 Data Definitions

1.5.1 Entity: Geographical Unit

"The GEOGRAPHICAL UNIT is a geographical sub-division of land into units for administrative or demographic purposes such as "Church of England Diocese", "Roman Catholic Parish", "County", "Output Area", "School Place Planning Area". The GEOGRAPHICAL UNIT also supports additional information such as whether the GEOGRAPHICAL UNIT is Urban or Rural".

Attribute Name	Attribute Definition	P K	F K	M	Datatype	FK Source Entity	FK Source Attribute	Controlled List
Geographical_Unit _Name	The name of the GEOGRAPHICAL UNIT.	Y	N	Y	Unicode_String(1,100)	Geographic al Unit	Geographical_ Unit_Name	
Geographical_Unit _Type	A controlled list of values that identifies the GEOGRAPHICAL UNIT TYPE. Values include "Church of England Diocese", "Roman Catholic Parish", "County", "Output Area", "School Place Planning Area".	Y	Y	Y	Unicode_String(1,50)			Geographical Unit Type

1.5.2 Entity: Geographical Unit Coordinates

The GEOGRAPHICAL UNIT COORDINATES links together a GEOGRAPHICAL UNIT with the physical map reference location contained within the GEOGRAPHICAL LOCATION. There can be many GEOGRAPHICAL UNIT COORDINATES which allows the geographical perimeter of the GEOGRAPHICAL UNIT to be established.

Attribute Name	Attribute Definition	P K	F K	M	Datatype	FK Source Entity	FK Source Attribute	Controlled List
Geographical_Unit_Name	The name of the GEOGRAPHICAL UNIT.	Y	Y	Y	Unicode_String(1,100)	Geographical Unit	Geographical_Unit_Name	
Geographical_Unit_Type	A controlled list of values that identifies the GEOGRAPHICAL UNIT TYPE. Values include "Church of England Diocese", "Roman Catholic Parish", "County", "Output Area", "School Place Planning Area".	Y	Y	Y	Unicode_String(1,50)	Geographical Unit	Geographical_Unit_Type	
Geographical_Locator_Id	A value that denotes and distinguishes the LOCATOR.	Y	Y	Y	Simple_String(1,600)	Geographical Location	Geographical_Locator_Id	

1.5.3 Associative Entity: Geographical Unit Hierarchy

The GEOGRAPHICAL UNIT HIERARCHY links together the various GEOGRAPHICAL UNIT geographical sub-division of land defined for administrative purposes into a hierarchy such as a County contains Parishes etc. This allows a lower level of GEOGRAPHICAL UNIT to be referenced and then by traversing up the GEOG ADMIN UNIT HIERARCHY the higher level GEOGRAPHICAL UNIT(s) can be returned.

Attribute Name	Attribute Definition	P K	F K	M	Datatype	FK Source Entity	FK Source Attribute	Controlled List
Geographical_Unit_Name_Pt ¹	The name of the GEOGRAPHICAL UNIT.	Y	Y	Y	Unicode_String(1,100)	Geographical Unit	Geographical_Unit_Name	
Geographical_Unit_Type_Pt	A controlled list of values that identifies the GEOGRAPHICAL UNIT TYPE. Values include "Church of England Diocese", "Roman Catholic Parish", "County", "Output Area", "School Place Planning Area".	Y	Y	Y	Unicode_String(1,50)	Geographical Unit	Geographical_Unit_Type	
Geographical_Unit_Name_Cd ²	The name of the GEOGRAPHICAL UNIT.	Y	Y	Y	Unicode_String(1,100)	Geographical Unit	Geographical_Unit_Name	

¹ This is the parent instance of Geographical_Unit_Name in the hierarchy

² This is the child instance of Geographical_Unit_Name in the hierarchy

Attribute Name	Attribute Definition	P K	F K	M	Datatype	FK Source Entity	FK Source Attribute	Controlled List
Geographical_Unit_Type_Cd	A controlled list of values that identifies the GEOGRAPHICAL UNIT TYPE. Values include "Church of England Diocese", "Roman Catholic Parish", "County", "Output Area", "School Place Planning Area".	Y	Y	Y	Unicode_String(1,50)	Geographical Unit	Geographical_Unit_Type	

1.5.4 Entity: Geographical Unit Information

The GEOGRAPHICAL UNIT INFORMATION defines additional information for a GEOGRAPHICAL UNIT from various sources such as ONS, NSPL and DCLG. This data does not globally define a GEOGRAPHICAL UNIT and is specific depending upon the requirements as it is "mapped data" (ie applied to a GEOGRAPHICAL UNIT for a specific purpose by an ORGANISATION or PERSON). Therefore, it is supported via a generic name/value pair design.

Attribute Name	Attribute Definition	P K	F K	M	Datatype	FK Source Entity	FK Source Attribute	Controlled List
Geographical_Unit_Name	The name of the GEOGRAPHICAL UNIT.	Y	Y	Y	Unicode_String(1,100)	Geographical Unit	Geographical_Unit_Name	
Geographical_Unit_Type	A controlled list of values that identifies the GEOGRAPHICAL UNIT TYPE. Values include "Church of England Diocese", "Roman Catholic Parish", "County", "Output Area", "School Place Planning Area".	Y	Y	Y	Unicode_String(1,50)	Geographical Unit	Geographical_Unit_Type	
Geog_Unit_Information_Name	The name of the GEOGRAPHICAL UNIT INFORMATION eg "Urban/Rural Indicator".	Y	N	Y	Unicode_String(1,100)	Geog_Unit_Information	Geog_Unit_Information_Name	
Geog_Unit_Information_Value	The value of the related GEOGRAPHICAL UNIT INFORMATION attribute eg "Rural".	Y	N	Y	Unicode_String(1,100)	Geog_Unit_Information_Value	Geog_Unit_Information_Value	

2 CHANGES FROM PREVIOUS VERSION

Geographical_Locator_Id updated to Simple_String (1,600).
