# 1 DATA STANDARD

## 1.1 Introduction

### 1.1.1 Application

This standard can be used to store or exchange data that covers the event of recording the parties involved in a PARTY PERSONAL ASSESSMENT.

The PARTY PERSONAL ASSESSMENT ASSOCIATE PARTY identifies any PARTYs in addition to the assessor and assessee and information about the association with the assessment such as the start data and end data and the involvement reason.

### 1.1.2 Compatibility with non-ISB standards

There are no known compatibility issues related to this standard.

### 1.1.3 Terminology and notation

The following sections contain:

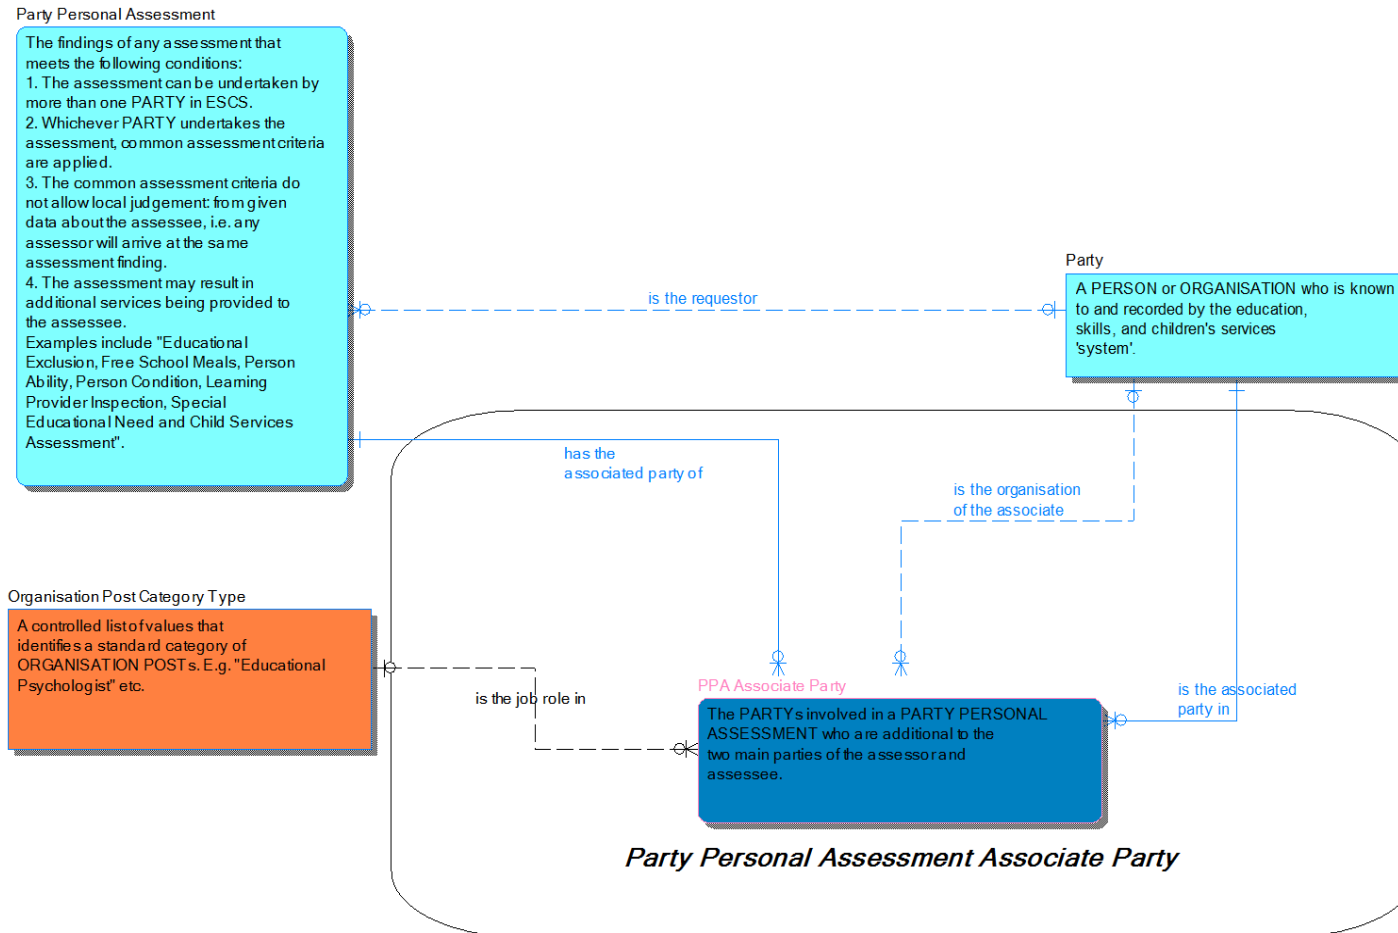

- **Entity Definition Model** – A high level diagram showing: entities; their descriptions and relationships
- **Attribute Model** – A lower level diagram showing the names of attributes making up entities. Attributes in the top section of an entities box are those making up its primary key
- **Data Definitions** – Detailed descriptions of each of the entities at an attribute level, showing attribute: name; definition; whether it is part of a key; whether it is mandatory; its data type and format; parent information and Controlled List association

Only those entities within the boundary square in the diagrams are part of this particular data standard, entities outside the boundary are shown for context purposes only (and can be found within other Business Data Standards), or separate Controlled List reference data.

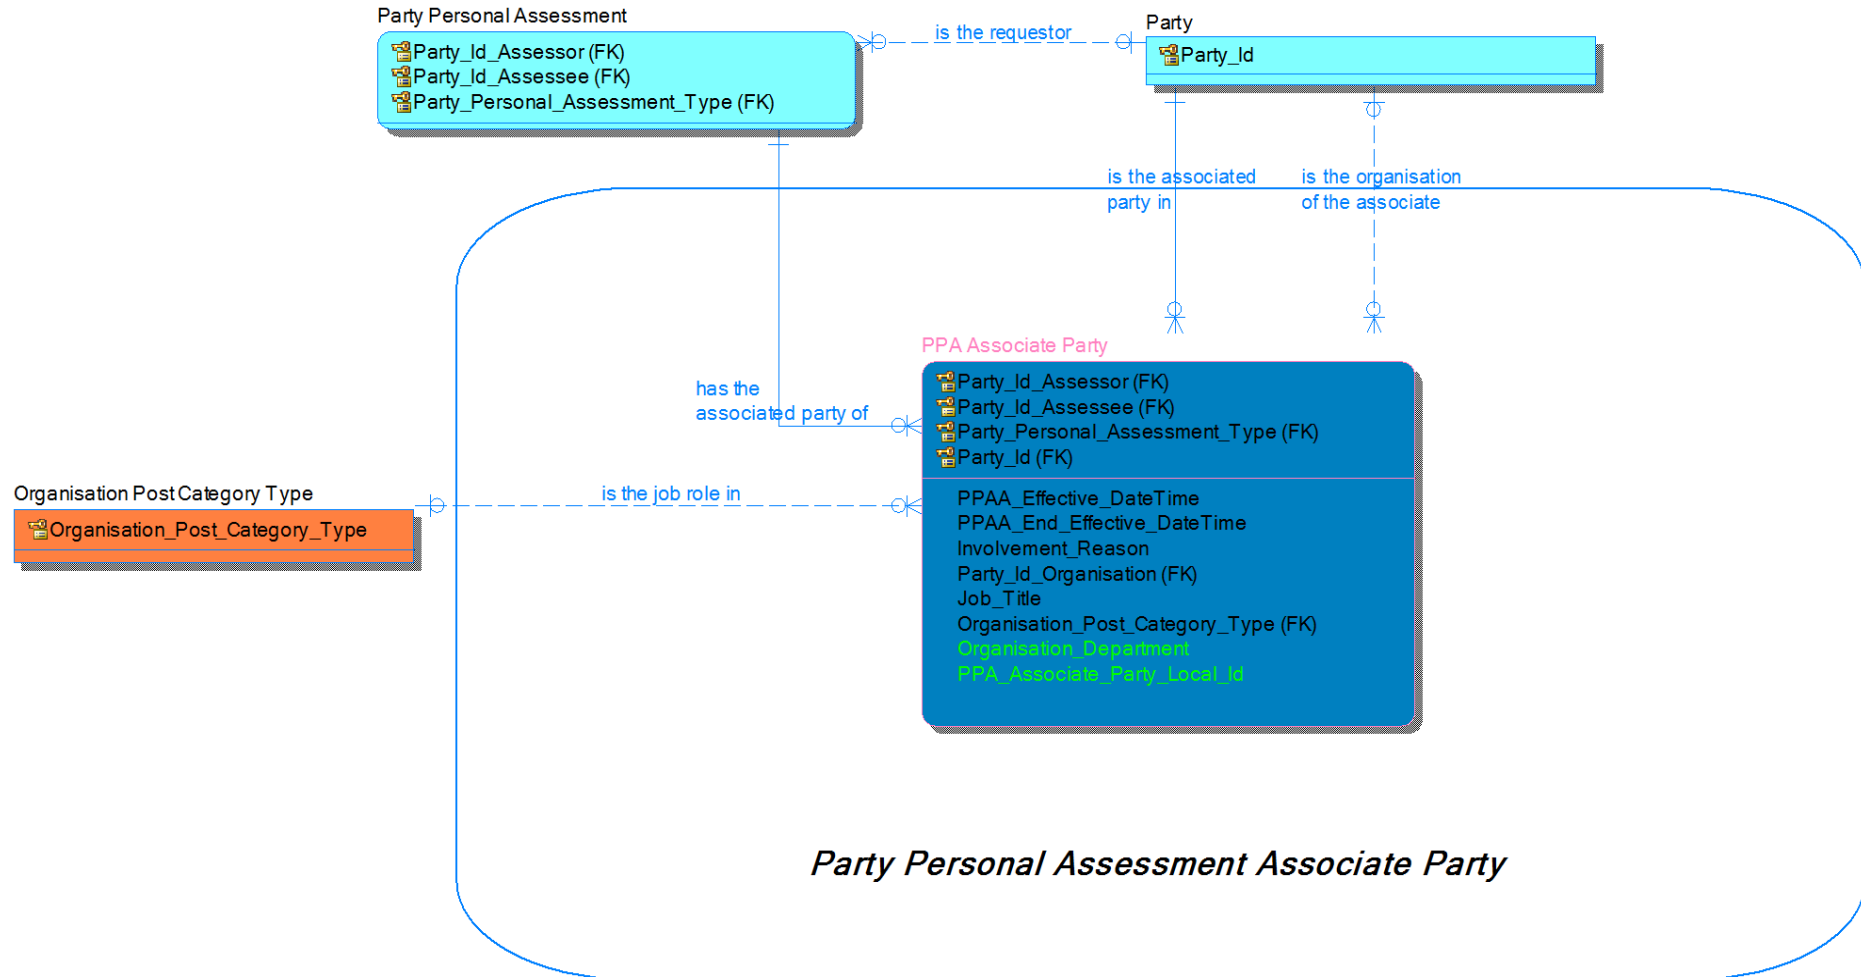

The standards for naming, notation and conventions used for this development can be found in the BDA Data Architecture Modelling Standards document. For convenience, a quick reference of the colours used in these diagrams is shown below.
